

# Minutes

---

**Meeting Title:** meeting6

**Date:** 16/05/2022

## Ways of obtaining key events

1. Calculate the probability of the sequences
2. Aggregate the nodes based on their temporal proximity
3. Filter by timestamps
4. Cluster them into major nodes

## Variability pattern

1. Use process models to highlight variability
2. Read the process model in the paper and use it as a common way
3. Find more traces

## Next plan

1. Live presentation about preliminary work, such as finding key events
